Network Engineer II – Telecom

Job Description

Network Engineer II - Telecom - (19014148)
Description

(Telecom) Network Engineer II

The Network Engineer II provides technical expertise for the successful design and implementation to support strategies to meet the business needs of the System. Designs and plans the implementation, optimization and operation of the telephony systems at remote and core locations and investigates methods to improve efficiencies.

WHAT IS EXPECTED (ESSENTIAL FUNCTIONS)
Works with management to determine Telecom business needs and implements effective enterprise-wide network strategies.
Coordinates with vendors/departments to procure hardware, software and services and obtain their assistance to achieve timely completion of projects.
Manages the Telecommunications network to ensure effective use of the installed technology. Investigates and resolves problems, inefficiencies and enhances network performance.
Provides strategic planning and technical support to determine the Telecom business needs throughout the company. Evaluates, tests, recommends, and implements specific solutions.
Creates and maintains documentation and performance growth and planning needs. Plans, manages and provides leadership on project teams, including the identification of the project scope and objectives and managing the process for timely project completion.
Researches new technologies to improve efficiencies with technology. Performs business case studies to justify the need for technology. Provides ongoing information to management, peers and customers regarding enhancements and innovations. Designs, engineers and manages complex system related communication and routing protocols.
May direct the activities of other technical staff, providing training as needed.

KNOWLEDGE, SKILLS AND ABILITIES
Project management, analysis, processing skills preferred
Excellent communication skills, both orally and written
Strong analytical abilities, customer service experience
Strong technical aptitude and troubleshooting skills
MS Office Advanced skill set

MINIMUM REQUIREMENTS ADDENDUM
License and Certifications:
Cisco CCNA certification preferred, Cisco Call manager knowledge/experience preferred
Telecommunications:
Platform specific database and administration advanced certifications for gateway, contact center, messaging and voice portal solutions.
